

SUDwell™

The Resin Bonded Slab Company

St Johns Church, St Leonards on Sea

SUDwell™ were delighted to undertake the refurbishment of the pathways for St Johns Church in St Leonards on Sea.

This 18th century church is surrounded by well manicured gardens, making it imperative to bring a new concept in the design of the pathways with thought and consideration for the overall appearance.

SUDwell™ worked closely with Church members and Chartered architects R.D.P arriving at a colour scheme using natural stone, that brings a fresh vision to the area whilst complementing the existing architecture.

St Johns Church, St Leonards on Sea

SUDwell™ have been working in the field of Resin Bonded and Resin Bound surfacing, and S.U.D's - Sustainable Urban Drainage for over 15 years. During that time SUDwell™ has rejuvenated many paths, driveways and car parks for churches and historical buildings, as well as large country houses and stately homes, public areas and high use walkways.

The company has always set the highest standards in its working practices and has prided itself on making the visions of clients and architects a reality.

Taking a tired piece of concrete or tarmac and turning it into a stunning new access point that compliments any building and totally transforms the external appearance where ever the SUDwell™ system is used.
